

DENSE PHASE CONVEYING

WITH CONTI-SCHUB®

CONTI-SCHUB® is the best technology for sensitive and fragile plastic pellets. It is a slow motion conveying method with low particle velocity under plug formation.

» Therefore, the method is recommended for plastic pellets which are sensitive to fines (dust) and streamers formation.

Gentle

Long-lasting

No surface treatment

High quality

» Gentle to sensitive products

» Reduces fines and avoids streamers

» No special pipe surface treatment required (e.g. shot-peening)

» Avoids pipe wear in case of abrasive product and ensures consistent high product quality over plant life time

INTACON® Control Unit for Conti-Schub®

- » **INTelligent Air CONTROL** for stable conveying under changing operating conditions
- » Replaces complex control requirements
- » Very simple and low risk operation
- » Increases overall performance by maximizing the conveying capacity over the full product range
- » Self adapting to all future changes (e.g. new grades)

HOW DOES INTACON® WORK?

- » Optimal air regulation for **high energy efficiency**

BENEFITS OF CONTI-SCHUB®

Highest reliability

Maximum flexibility

Long life time
